10-40% – Bet 10-39,9% of pot

40-75% – Bet 40-74,9% of pot

75-90% – Bet 75-89,9% of pot

90-100% – Bet 75-100% of pot

Some opponents bet little to be called and much to be laid down. Others bet much when bluffing and little for value.

Using block Bet&Win stats you can easier understand which bet sizes the opponent uses for bluffing and value.

The lower the win at showdown percentage for a specific size, the more bluffs, and vice versa – the higher the win rate, the more often value bets are used.

Revealing inclinations to folds on river bets

Red stats – folds on river at various bet sizes as compared to average figures on your limit.

Opponents may react more trustfully to bets of specific sizes. I.e. the opponent may call high bets more often in presumption that his rival bluffs "all along", or fold low bets suspecting the rival wants to value-bet bit-by-bit.

This block of stats allows to accurately choose bets for bluffing and value-betting to make your opponent call more often when you need it and lay down when you are bluffing.

more often vs average	
fold vs bet IP	fold vs bet OOP
-44	-24
25	-32
9	-18
-3	-31
9	-58

More often vs average fold vs bet: Stats highlighted with red shows how much more often than average the opponent folds vs bets of specific sizes.

Explanation:

-44% - caller out of position folds vs bet 44% less often for bets 10%-40% of pot

25% - caller in position folds vs bet 25% more often for bets 40%-60% of pot

Plus – he folds, Minus – he does not fold.

For bluffs: choose the bet size with positive stat (**25%**)

For value bet: choose the bet size with negative stat (**-44%**)
